# Lab\_assignment-1

Measurements of electric power consumption in one household with a one-minute sampling rate over a period of almost 4 years. Different electrical quantities and some sub-metering values are available. Dataset: https://d396qusza40orc.cloudfront.net/exdata%2Fdata%2Fhousehold\_power\_consumption.zip Perform the following:

#### Exercise 1:

- 1. Load the data
- 2. Read first 5 rows to get headers
- 3. Read 2900 rows that contain information on 2007-02-01 and 2007-02-02
- 4. Converting Date and Time variables to Date/Time format

Exercise 2: Subset the loaded data for 2007-02-01 and 2007-02-02

#### Exercise 3:

- 1. Histogram of global active power consumption
- 2. Global active consumption over time
- 3. Energy sub metering

## **Exercise 1:**

- 1. Load the data:
- 2. Read first 5 rows to get headers

First, download the dataset from the provided link and extract it. You'll find a file named "household\_power\_consumption.txt." Use the following Python code to load the data into a pandas DataFrame:

```
In [1]: import pandas as pd

# Load the data into a DataFrame
data = pd.read_csv("household_power_consumption.txt", sep=";", na_values="?")

# Display the first few rows of the DataFrame
data.head()
```

| Out[1]: |   | Date       | Time     | Global_active_power | Global_reactive_power | Voltage | <b>Global_intensity</b> | Sub_meteri  |
|---------|---|------------|----------|---------------------|-----------------------|---------|-------------------------|-------------|
|         | 0 | 16/12/2006 | 17:24:00 | 4.216               | 0.418                 | 234.84  | 18.4                    |             |
|         | 1 | 16/12/2006 | 17:25:00 | 5.360               | 0.436                 | 233.63  | 23.0                    |             |
|         | 2 | 16/12/2006 | 17:26:00 | 5.374               | 0.498                 | 233.29  | 23.0                    |             |
|         | 3 | 16/12/2006 | 17:27:00 | 5.388               | 0.502                 | 233.74  | 23.0                    |             |
|         | 4 | 16/12/2006 | 17:28:00 | 3.666               | 0.528                 | 235.68  | 15.8                    |             |
| 4       |   |            |          |                     |                       |         |                         | <b>&gt;</b> |

- 3. Read 2900 rows for 2007-02-01 and 2007-02-02
- 4. Converting Date and Time variables to Date/Time format

```
In [2]: # Read 2900 rows for 2007-02-01 and 2007-02-02

# Convert the 'Date' column to datetime
data['Date'] = pd.to_datetime(data['Date'])
data.head()
```

C:\Users\devje\AppData\Local\Temp\ipykernel\_1364\1974775207.py:4: UserWarning: Parsing dates in % d/m/W format when dayfirst=False (the default) was specified. Pass `dayfirst=True` or specify a format to silence this warning.

data['Date'] = pd.to\_datetime(data['Date'])

# **Exercise 2:**

Subset the loaded data for 2007-02-01 and 2007-02-02

```
In [4]: # Subset the data based on the given dates
subset_data = data[(data["Date"]=="2007-02-01") | (data["Date"]=="2007-02-02")]
# Display the subsetted data
subset_data.head()
```

| Out[4]: |       | Date           | Time     | Global_active_power | Global_reactive_power | Voltage | ${\bf Global\_intensity}$ | Sub_meterir |
|---------|-------|----------------|----------|---------------------|-----------------------|---------|---------------------------|-------------|
|         | 66636 | 2007-<br>02-01 | 00:00:00 | 0.326               | 0.128                 | 243.15  | 1.4                       |             |
|         | 66637 | 2007-<br>02-01 | 00:01:00 | 0.326               | 0.130                 | 243.32  | 1.4                       |             |
|         | 66638 | 2007-<br>02-01 | 00:02:00 | 0.324               | 0.132                 | 243.51  | 1.4                       |             |
|         | 66639 | 2007-<br>02-01 | 00:03:00 | 0.324               | 0.134                 | 243.90  | 1.4                       |             |
|         | 66640 | 2007-<br>02-01 | 00:04:00 | 0.322               | 0.130                 | 243.16  | 1.4                       |             |

# **Exercise 3:**

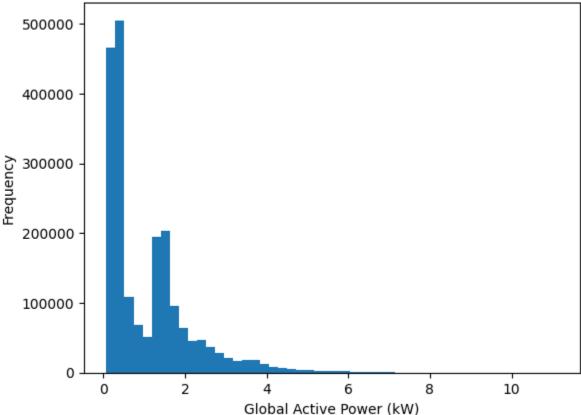

1. Histogram of global active power consumption

Create a histogram: To create a histogram of the electric power consumption, you can plot the "Global\_active\_power" column using matplotlib or any other plotting library:

```
import matplotlib.pyplot as plt

# Plot a histogram of global active power consumption
plt.hist(data['Global_active_power'].dropna(), bins=50)
# plt.hist(data['Global_active_power'].dropna())
plt.xlabel('Global Active Power (kW)')
plt.ylabel('Frequency')
plt.title('Histogram of Global Active Power Consumption')
plt.figure(figsize=(12,12))
plt.show()
```

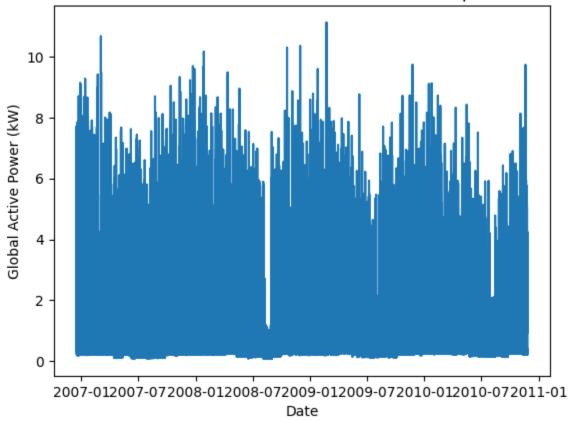

<Figure size 1200x1200 with 0 Axes>

#### 2. Global active consumption over time

Create a time series: To create a time series plot of the electric power consumption over time, you can plot the "Global\_active\_power" column against the "Date" column:

```
In [11]: # Create a time series plot of global active power consumption
    plt.plot(data['Date'], data['Global_active_power'])
    plt.xlabel('Date')
    plt.ylabel('Global Active Power (kW)')
    plt.title('Time Series of Global Active Power Consumption')
    plt.figure(figsize=(12,10))
    plt.show()
```

### Time Series of Global Active Power Consumption

<Figure size 1200x1000 with 0 Axes>

#### 3. Energy sub metering

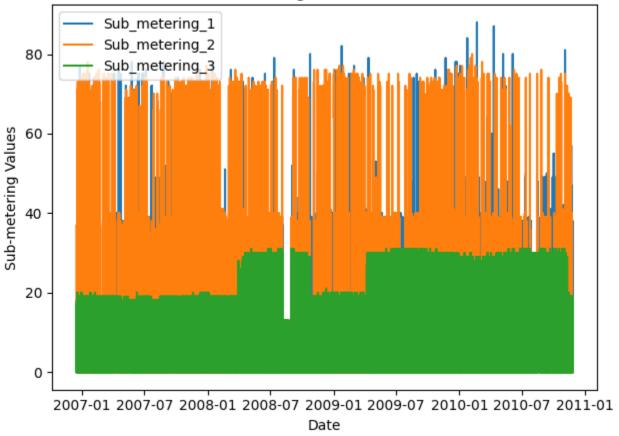

Create a plot for sub-metering: To create a plot for sub-metering values, you can plot the relevant columns from the dataset. Assuming the sub-metering values are stored in the columns "Sub\_metering\_1," "Sub\_metering\_2," and "Sub\_metering\_3," you can plot them as follows:

```
In [12]: # Create a plot for sub-metering
   plt.plot(data['Date'], data['Sub_metering_1'], label='Sub_metering_1')
   plt.plot(data['Date'], data['Sub_metering_2'], label='Sub_metering_2')
   plt.plot(data['Date'], data['Sub_metering_3'], label='Sub_metering_3')
   plt.xlabel('Date')
   plt.ylabel('Sub-metering Values')
   plt.title('Sub-metering Values Over Time')
   plt.legend()

plt.tight_layout()
   plt.figure(figsize=(12,14))
   plt.show()
```

```
C:\Users\devje\AppData\Local\Temp\ipykernel_1364\4225496983.py:10: UserWarning: Creating legend wi
th loc="best" can be slow with large amounts of data.
  plt.tight_layout()
D:\Python311\Lib\site-packages\IPython\core\pylabtools.py:152: UserWarning: Creating legend with l
oc="best" can be slow with large amounts of data.
  fig.canvas.print_figure(bytes_io, **kw)
```

## Sub-metering Values Over Time

<Figure size 1200x1400 with 0 Axes>

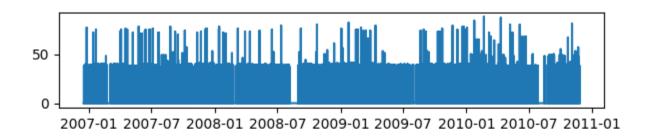

```
In [13]: # subploting
    plt.subplot(3, 1, 1)
    plt.plot(data['Date'], data['Sub_metering_1'], label='Sub_metering_1')
    plt.subplot(3, 1, 2)

    plt.plot(data['Date'], data['Sub_metering_2'], label='Sub_metering_2')

    plt.subplot(3, 1, 3)
    plt.plot(data['Date'], data['Sub_metering_3'], label='Sub_metering_3')

    plt.xlabel('Date')
    plt.ylabel('Sub-metering Values')
    plt.title('Sub-metering Values Over Time')
    plt.legend()

    plt.tight_layout()
    plt.figure(figsize=(12,14))
    plt.show()
```

<Figure size 1200x1400 with 0 Axes>
